**Sensational New Horizons: New Wheel End SAF 60 ONE Opens Up Completely New Possibilities**

SAF-HOLLAND has developed its own wheel end with a new offset of 60 mm and thus managed something that no-one in the branch had ever thought possible: in combination with aluminium wheels and a new in-house disc brake also developed by SAF, the new wheel end enables a phenomenal weight reduction of 204 kilos for a three axle semi-trailer — a huge saving in the transport business. The new wheel end can also replace the commonly used wheels with offset 0mm or 120mm, thus providing fleets and transport companies with one wheel which would offer them undreamed-of advantages. The English designation SAF 60 ONE describes these additional advantages in one word: 1 wheel end for both tractor and trailer, which can be equipped with disc or drum brakes, aluminium or steel rims and has new, standard wheel bolts. Fleet managers will have no problem finding further benefits as, for example, almost unlimited flexibility, extremely simplified warehousing etc. The new wheel end will be premiered at the IAA in Hanover in Hall 26, Stand A06.

**Hold Your Breath: New Tyre Inflation System SAF TIRE PILOT for Retrofitting in Trailers**

Monitoring the correct tyre pressure is crucial to keeping fleet operating costs under control. SAF-HOLLAND can now offer its own retrofit tyre inflation system SAF TIRE PILOT. The system monitors and maintains the desired pressure in the trailer tyres and thus not only saves diesel, but also extends the service life of the tyres.

### **Europe Premiere: SAF-HOLLAND Verkehrstechnik Presents its New Air Suspension System for Heavy Trucks**

NEWAY has for decades been one of the leading manufacturers of suspension systems for heavy commercial vehicles in the USA. The brand is part of the global SAF-HOLLAND Group and is introducing into Europe its NEWAY ADZ, a proved and tested suspension which can save truck manufacturers with special requirements own time- and cost-intensive development. This very robust system is suitable for off-road conditions and without any restrictions is particularly suitable for the powered axles of heavy trucks. The NEWAY ADZ is distributed in Europe by SAF-HOLLAND Verkehrstechnik.

### **New Aluminium Fifth Wheel FW-AL E Saves up to 55 kilos Weight**

The first and lightest series-produced, forged aluminium fifth wheel worldwide, with EC approval, is from SAF-HOLLAND: the FW-AL E is up to 55 kg lighter and has no longer any parts which require regular greasing. It also comes with a Performance Guarantee covering 500,000 kms and valid for up to 3 years, wear parts excluded. With its FW-AL E, SAF-HOLLAND Verkehrstechnik wants to offer tank and silo transport companies in particular an interesting alternative solution to conventional fifth wheels.

### **New Premium SAF TITAN Landing Gear**

Specially developed by SAF-HOLLAND for the European market: the SAF TITAN permits a 55,000 kg admissible static load and 25,000 kg lifting capacity. Its patented floating mounted spindle nut compensates thrust and lateral forces which may arise when connecting and disconnecting. The SAF TITAN can be fitted with any of four different foot variants.

### **First SAF Trailer Disc Brake means 36 kilos Weight Reduction for a Triaxle Semi-trailer**

In cooperation with Haldex, SAF-HOLLAND has developed an extremely light disc brake. Brake pads included, the new SAF SBS 2220 weighs only 31 kilos and is suitable for use in semi-trailers and trailers with up to 9-ton axle load and 22.5" tyres. The brake has successfully completed extensive bench tests and full test runs. It will be on show at the IAA.

### **“We Have More Aces Up Our Sleeve”**

SAF-HOLLAND Managing Director Detlef Borghardt announces further innovations at the IAA: “We have used the past few months well and are excellently prepared.” In actual fact, SAF-HOLLAND intends to present even more new products at the IAA. “Moreover, and for the first time ever, we will also be presenting a complete service package which we have called FLEETS & SERVICE“. Just another convincing reason to visit Stand A06 in Hall 26 sometime between the 23rd and 30th September.
