

## SAF Axle/Suspension

### SAF Axles with PSI Tire Inflation to Now Have ThermALERT™ Option as Standard

Effective February 2018

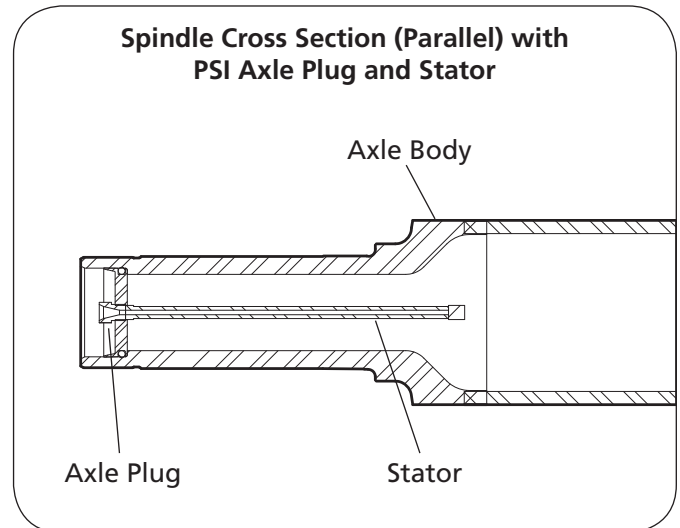

#### Product Enhancement:

All SAF axles and suspension systems equipped with PSI tire inflation will now have the ThermALERT™ feature as a standard offering. The prior design axle plug without ThermALERT™ will no longer be available.

The ThermALERT™ feature will indicate a possible thermal related wheel end event as the insert will melt at a predetermined temperature and create an audible whistling noise.

Please note the following:

- Axle part numbers with PSI prep that DO NOT already include ThermALERT™ will become obsolete.
- ThermALERT™ plugs can be used in place of standard PSI plugs for service repairs.
