

SAF CBX23 Trailer Air Suspensions

Air Spring Product Update

Notification

This is to notify you of a product update to the air springs used on the CBX23-317 trailer air suspension model.

In our ongoing efforts to provide the industry with light weight, high quality products, we have changed the air spring offering on our current production models to a new lighter weight air spring offering.

This new air spring provides a weight savings of 2.7 lbs. over the previously supplied air spring, or over 5 lbs. per axle.

Field Replacement

If you find it necessary to replace an air spring in the field on the new style CBX23-317 model (Figure 1), the new air springs are completely interchangeable. When performing this service replacement, it is not necessary to replace both air springs.

Important

The old style CBX23 full cast beam models will continue to require the originally supplied air spring for field replacement (Figure 2).

RIDE HEIGHT	NEW STYLE AIR SPRING	OLD STYLE AIR SPRING
14" – 15"	90557403	90557373
16" – 17"	90557404	90557369
