

# Important Info – September 2018

## HOLLAND Fifth Wheels

### Aftermarket Fifth Wheel Air Cylinder Material Change

**Effective: October 1, 2018**

SAF-HOLLAND will begin transitioning aftermarket air cylinders from stainless steel to aluminum cylinders in all service and replacement kits.

Aluminum cylinders have been used in OEM applications for many years and provide a weight savings over stainless steel. Aftermarket customers can now benefit from the same weight savings as OEM customers. Service and replacement cylinder kits will transition to aluminum as inventory of the stainless steel cylinders are depleted. The transition will start October 1, 2018, and continue until all cylinders have been changed to aluminum. The cross reference list is provided below.

If you have any questions or require additional product assistance, please contact your account manager or customer service representative.
