HOLLAND® Fifth Wheels

Notice of Redesigned FW17 Fifth Wheel Model Effective October 2020

Attention

This product notice applies to the FW17 Fifth Wheel Top Plate.

Effective October 2020, SAF-HOLLAND will introduce a redesigned version of our FW17 Fifth Wheel model.

The FW17 Fifth Wheel will now include a highly optimized ductile iron top plate, a replaceable front lock, and improved lock mechanism functionality. The engineers at SAF-HOLLAND improved this fifth wheel with features like a wider throat for easier couplings and improved maintenance efficiencies that make the new design easier to rebuild. The new FW17 is also easier to retrofit with optional air release due to integrated mounting holes and common components.

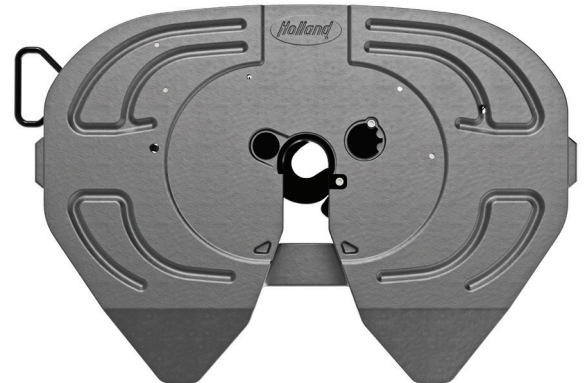

Current owners of the FW17 can take advantage of this new design as the fifth wheel is fully retrofittable onto existing SAF-HOLLAND mounting systems. Warranty remains unchanged and the fifth wheel is still approved for both standard and moderate duty applications, per the guidelines published in the XL-FW10066SG Rev O or newer Fifth Wheel Product Selection Guide.

Contact your SAF-HOLLAND Account Manager for more information concerning the new FW17.

Legacy Cast Steel FW17

New Ductile Iron FW17

- Cast Ductile Iron Material
- Replaceable Front Lock
- Wider Throat for Easier Coupling
- Larger Diameter Mounting Pins w/ Revised Bushings
