

Important Info – January 2021

HOLLAND® Landing Gear Products

Landing Gear Packaging Update for Products Shipped from the Warrenton Plant

Effective January 2021

Attention

Recent environmental initiatives require SAF-HOLLAND to revise packaging on all landing gear shipments out of the Warrenton, Missouri plant.

Upcoming changes

Beginning January 2021, SAF-HOLLAND will start phasing out styrofoam inserts used in all landing gear packaging.

Export-certified heat treated wood inserts will be utilized in all packaging of non-hardware legs (without bracing bracketry).

All wood packaging has been used for Mark V™ landing gear legs out of the Woodstock, Canada facility for years and is being implemented for all landing gear legs out of the Warrenton plant. The packaging will be more rigid, safer, and allows customers to handle their shipments with greater efficiency.

This transition is expected to be completed within a few months as inventory of the former packaging is depleted.

This is yet another step as SAF-HOLLAND continues to work on green initiatives that will lower the company's environmental footprint.

If you have any questions or require additional product assistance, please contact your account manager or SAF-HOLLAND Customer Service at 1-888-396-6501.

Updated Wood Insert Packaging for Landing Gear
