

## Weight optimization through design change to SAF INTRA steel hanger bracket series

In the course of continuous product improvement, SAF-HOLLAND has now optimized the design of the SAF INTRA steel hanger bracket series. The changeover is continuous and is currently being implemented for all heights of hanger bracket.

### Features of the new steel hanger bracket series:

- Lower weight - for a 3-axle trailer, weight is reduced by up to 3 kg.
- The same rigidity and length of service life, but reduced weight.
- A more homogeneous surface - fewer edges in painting and coating processes
- No change to assembly and mounting procedures used up to now

Over all height	Design up to now	Order no. up to now	Conversion	New design	New order number

## Weight optimization through design change to SAF INTRA steel hanger bracket series

Any orders of complete axle units will be supplied with the new hanger brackets automatically, depending on the delivery dates given above.

**Before ordering any non-mounted, separately sold hanger brackets, customers are requested to adjust their ordering system and enter the new order numbers.**
